

HEALTH

- POLICY STATEMENT -

The New York State Grange is taking an active role to raise awareness of problems in the health care field, especially the unique needs of the rural community. We, as an organization, should actively work with other rural agencies and organizations to make everyone aware of these problems and work to help find possible solutions.

Ever-rising health care costs mean that more people are unable to afford adequate health care for themselves and their families. Experience has shown that some government-sponsored and administered programs have not been effective.

The Grange will continue to work for a compromise on health care reform issues, one that will encourage the continuation of freedom of doctors and the facilities we wish to use. We also need to be a strong advocate for rural areas so that their special needs are not neglected by those who shape our policies.

We must continue to be an active participant in all health care reform debates. Areas which continue to need our attention are the cost of prescription medications and rising availability of counterfeit medication, long-term care and catastrophic illness insurance coverage, veterans medical benefits, the protection of personal assets and financial savings to pay for long-term care and Medicare reforms.

Medicaid is another government program which consumes a large share of taxpayer money. An effort must be made to contain the cost of the Medicaid program. Emphasis should be placed on preventive or “well-care” service rather than illness or “need care” service. More emphasis needs to be placed on the review of unnecessary, experimental or high-risk treatments unless medically documented as lifesaving. This will help to control the ever-increasing costs of this program.

Young people are our most valuable asset and the future of the Grange. We must support measures to protect the health and well-being of our country’s youth. Since college students are at a particularly higher risk for contracting meningitis, we feel that all students attending college should be required to be immunized against meningitis to prevent the spread of this deadly disease.

We also urge the study of substances such as K-2, a substance being sold in stores as “the new legal marijuana”, but have not been fully tested or the use controlled. We would support consideration of a federal law to control K-2, and similar substances.
